

“Secondary Treatment” LIVE ONLINE Workshop

This 3 hour “Secondary Treatment” live online training will introduce you to the principle operations, treatment strategies, components, equipment, and challenges encountered during secondary treatment.

We will:

- explain the conventional activated sludge process and how it is applied in SBRs, Oxidation Ditches, and other related treatment operations.
- discuss how fixed film secondary treatment works and why it is being replaced by more modern treatment approaches.
- explore selector zones, how they work, and how to utilize them in your treatment process to achieve the desired outcome.
- explain how nitrification and denitrification effect your plant and explore effective strategies for how to work with the nitrification / denitrification cycle to optimize your overall treatment process.

This **3 hour “Secondary Treatment” live online training** provides you with essential knowledge of the secondary treatment process necessary to succeed in your career and obtain or maintain your wastewater operator certification.
