Course Overview

This course will cover the following information: The Oregon Confined Space Standard OAR 437-002-0146, Characteristics of Confined Spaces, Hazards and Managing of Hazards, Duties and Responsibilities of Entrants, Attendants, and Entry Supervisors, The Use of Equipment, Care, and Maintenance Requirements, Rescue, and Personal Protective Equipment.

Course Format: We will conduct a seven hour permit required Confined Space class. The first four hours will consist of in-class discussions covering material within the student manuals. The last three hours will consist of hands on equipment demonstrations focusing on usage, and practical application of gas monitors, rescue equipment, harnesses, blowers, fall protection, and Live Practice Non-Entry Rescues.

Note: Manuals will be supplied to students at the start of class. Prior to the day of class, please provide a head count that will be attending this course.

Training Objectives: This course is designed and intended to serve as a solution to your training needs in the following:

- a) Define and understand the Oregon Confined Space Standard OAR 437-002-0146
- b) Understand the definition of a confined space and the potential hazards within a confined space
- c) Identify requirements for permit entry forms
- d) Understand roles and identify designated entrants, attendants, and entry supervisors of permit spaces
- e) Understand requirements for non-entry rescue, entry rescue, and third party rescue
- f) Understand the basic functions of gas monitors, rescue equipment, harnesses, blowers, and fall protection

Upon completion of this course, each student will be issued a certification card for confined space entrant, attendant, and entry supervisor training. Please contact us with any questions or to discuss additional details of the course.

Thank you,

Greg McDonald
