

“A Roadmap to the Wastewater Treatment Process” In-Person Workshop

This 7 hour “A Roadmap to the Wastewater Treatment Process” In-Person training will explain the basic principles applied in wastewater treatment. You will learn about the path wastewater will follow from where it is generated to where the treated water is discharged.

We will discuss the components of a wastewater system and explain their functions starting with the collection system and headworks, moving to primary and secondary treatment followed by disinfection and ending with the disposal of treated water. Furthermore, you will learn about solids management and biosolids disposal.

Throughout the workshop you will become familiar with the terminology, treatment conditions, and challenges commonly found in the wastewater industry.

Additionally, you will get introduced to the equipment used in wastewater treatment, such as screens, mixers, aerators, chlorinators, UV disinfection, screw presses, belt presses, dryers, SCADA, and more.

This **“A Roadmap to the Wastewater Treatment Process”** In-Person workshop will provide you with an essential understanding of the principles and processes applied in

wastewater treatment. This class is also accepted as training towards obtaining or maintaining your wastewater operator certification.
