

Clackamas Water Treatment Plant Operators meeting

10-24-23

Adam Bjornstedt the Chief Engineer for Clackamas River Water (CRW) will talk about CRW's Water Treatment Plant Facility Master Plan. Clackamas River Water completed its first formal Water Treatment Plant Facility Master Plan in 2021. This presentation will introduce the plant, share background information, discuss how key assessment drivers helped identify improvement needs, discuss options considered, and review how this information is being blended with the District's overall Capital Improvement Program for short and long term system improvements.

The meeting will also include a tour of CRW's direct filtration water treatment plant and their On-site Accredited Laboratory. CRW has invested in having an on-site accredited laboratory which test for two types of contaminants (indicator bacteria and cyanotoxins). By having an on-site laboratory CRW can get results faster and on a more flexible schedule when time is critical to our customers.

DETAILS & AGENDA

WHEN: Tuesday, October 24th

WHERE: Clackamas River Water Treatment Plant located at 9100 SE Mangan Drive, Clackamas, OR 97015
