

# “Process Control – Utilizing lab data to control & troubleshoot your treatment process”

## LIVE ONLINE Workshop

**In this 3 hour “Process Control – Utilizing lab data to control & troubleshoot your treatment process” live online training we will explore what laboratory results you can use to monitor the efficiency of your treatment process, identify changes to treatment conditions, and troubleshoot the operation.**

In this workshop we will discuss how to:

- interpret lab results for tests like TSS, VSS, BOD, microscopy, nutrients, and what they mean for your treatment process
- use lab data to monitor the performance of your treatment process
- decide which test to request to get the answers you need to fine tune or troubleshoot your operation

- identify which location and time is best to collect a sample for the purpose you have in mind

Our **3 hour “Process Control – Utilizing lab data to control & troubleshoot your treatment process” live online training** will provide you with tools to successfully fine tune your treatment processes to get the best quality and efficiency out of your system, meet your regulatory requirements, and have a cost-effective operation.
