"Introduction to SCADA" Live Online Workshop

In this **3 hour live online "Introduction to SCADA" workshop** we will provide students with a basic understanding of how Supervisory Control and Data Acquisition (SCADA) systems operate, their purpose and function, system components and communication techniques.

During this class we will explore:

- Describe the purpose and function of SCADA systems
- Review the different types of SCADA systems
- Discuss SCADA communication and sensor options
- Remote control vs local control systems

This class is part of our "mechanical series" of classes.
