

"Introduction to Collection System Inspections" Workshop

This **3-hour LIVE ONLINE "Introduction to Collection System Inspections"** will provide a general overview of the common practices applied and problems encountered when conducting collection system inspections. In this class we will:

- discuss inspection equipment including CCTV, smoke testing, and dye testing
- explain inspection standards
- review of force main inspection including soil sampling, acoustic monitoring, and smart pigs
- explore many examples of common problems encountered when inspecting gravity sewers with visual aids
- briefly introduce trenchless rehabilitation methods, advantages, and disadvantages
