

“Review & Exam Prep for Water Distribution Manager - Operator 1 & 2” Workshop

You made the decision that it is time to take your Water Distribution Manager / Operator Exam. That's a huge step. Whether you are new to the field or have been working in it for years, taking the certification exam can be unnerving and requires a lot of preparation. Studying distribution system manuals, talking to other operators, learning test taking skills . . . these are all great steps that will help you successfully pass your exam. Exam prep classes are great opportunities to hear about what to expect from the exam, refresh your knowledge, identify your strengths and weaknesses, learn from fellow operators how they were successful with taking other exams, and more.

Our **3 day IN-PERSON "Review & Exam Prep for Water Distribution Manager / Operator Level 1 & 2"** is perfect for operators who are preparing for their certification exam. This class will explain what to expect from the exam and help you identify areas you may want to focus on during your exam prep activities. In this workshop we will:

- review:
 - Distribution system components, operation, and maintenance
 - Pump stations
 - Equipment installation, operation, and maintenance
 - Pumps, motors, and mechanical systems
 - Disinfection
 - Water storage
 - Cross connection control
 - Laboratory analyses & interpretation
 - Safety
 - Security
 - Public Interaction
 - Administrative Procedures

- exercise math formulas as they apply to water distribution systems
- explain how to make sense of word problems and determine how to obtain the correct answer
- provide many opportunities to practice and solve problems typical of those encountered on certification exams
- share tips for how to prepare yourself for the exam
- explore test taking techniques

This **3 day IN-PERSON "Review & Exam Prep for Water Distribution Manager / Operator Level 1 & 2"** workshop will help you move your thought process from operation mode into the "test taking mode" and boost your confidence in your ability to pass the exam.

Since Drinking Water Distribution System Certification Exams require knowledge across a very complex and wide area, general exam prep classes are fast paced and do not allow for in depth discussions and explanations; instead, they focus on review and practice questions. For those who are struggling with water math we would strongly encourage you to also take our "Math Review & Exam Prep for Level 1 & 2 Operators" workshop.
