Maintenance of Wastewater Systems

Course title: Maintenance of Wastewater Systems

Drinking Water CEUs: 0 h

Wastewater CEUs: 1.0 h

Instructor bio: **Maelle LIMOUZIN** is a Water Resources and Environmental Engineer who studied at UT Austin. She spent 10 years working in a consulting company for drinking water and wastewater public utilities and 3 years in a company that manages drinking water and wastewater facilities. Currently, she uses her technical expertise and experience to train public and private organizations in managing their drinking water and wastewater systems.

Course description: In this course, we begin by presenting the general concepts of maintenance, followed by the maintenance operations for wastewater collection systems. Finally, we discuss maintenance operations for treatment plants.

Learning goals:

- Explain the management cycle of corrective and preventive maintenance work
- Carry out preventive maintenance operations in wastewater systems

Tracking attendance method:

The e-learning platform offers a highly interactive experience designed to engage learners at every stage. It begins with an initial test to assess knowledge and tailor the learning journey. The course includes short, focused videos interspersed with mandatory training quizzes that reinforce key concepts and ensure active participation. Students are required to watch every video entirely and to answer practice questions before advancing to the next course module. Students cannot skip course content. A final quiz at the end of each chapter evaluates overall comprehension and certifies the learner's mastery of the material. Students must obtain a minimum score of 70% for every chapter's final quiz to successfully complete the course and obtain the certificate of attendance. The platform automatically tracks each learner's learning time. The real learning time is indicated alongside the delivered credits in the course completion certificate.

Course outline: Maintenance of Wastewater Systems

Initial Test		6 min
1. General Concepts of Maintenance	1.1. Course Overview	1 min
	1.2. Introduction to Maintenance	6 min
	1.3. Maintenance Work Management Process	5 min
	1.4. Chapter 1 - Fact Sheets	1 min
	Chapter final test	2 min
2. Maintenance of Wastewater Collection Systems	2.1. Preventive Maintenance of the Main Components of a Wastewater Collection System	4 min
	2.2. Problems Encountered in a Wastewater Collection System	4 min
	2.3. Progression of a Maintenance Clearing Operation	5 min
	2.4. Chapter 2 - Fact Sheets	2 min
	Chapter final test	3 min
3. Maintenance of Drinking Water Facilities and Treatment Plants	3.1. Preventive Maintenance of the Main Components in Drinking Water Facilities and Wastewater Treatment Plants	6 min
	3.2. Problems Encountered in Electro Pump Units	5 min
	3.3. Preventive Maintenance of Electro Pump Units	5 min
	3.4. Course Glossary	3 min
	3.4. Chapter 3 - Fact Sheets	3 min
	Chapter final test	3 min
Total Learning Time		64 min
Requested Contact Hours		1 h
