Presentation Title & Abstract:	<u>Michigan Industrial Pretreatment Program (IPP) PFAS Initiative - Identified Industrial Sources of PFOS to Municipal Wastewater Treatment Plants (WWTPs)</u>	
	Michigan required 95 WWTPs with required IPPs to evaluate their industrial users as potential sources of perfluorooctane sulfonic acid (PFOS) and perfluorooctanoic acid (PFOA). The majority of significant PFOS sources to WWTPs were landfills that accepted industrial wastes containing PFOS, metal finishers with a history of fume suppressant use, and contaminated sites associated with industries or activities with PFOS usage. Other sources found included centralized waste treaters (CWTs), paper manufacturing/packaging, commercial industrial laundries, chemical manufacturers, and sewers contaminated with AFFF. Michigan has effectively worked with WWTPs that have exceeded the PFOS water quality values to implement source reduction to decrease the PFOS concentrations in the influent, effluent, and biosolids/sludge. All effective treatment has been conducted at the source rather than at the municipal WWTP.
