<b>Presentation Title &amp; Abstract:</b>	<p>Title: Conducting Effective Industrial User Site Inspections</p> <p>Abstract: Unauthorized wastewater discharge from industries and other non-domestic sources can cause significant problems at wastewater treatment plants, including hazardous conditions, interference of operations, and pass-through of pollutants. Site inspections are essential to fully understand an industry's process and to correctly classify an industry for both approved and non-approved pretreatment programs. This talk's focus will present guidance from the 2017 "USEPA Industrial User Inspection and Sampling Manual for POTWs", and suggestions for key questions to ask of several industrial user types for classification and confirmation of compliance.</p>
