

“Internal Laboratory Audits - Best Practices” ONLINE Workshop

During this 3.5 hour LIVE ONLINE workshop we will explain the purpose of internal laboratory audits and how they will help you to stay compliant with laboratory's accreditation.

Analytical data produced for regulatory compliance must meet many state and federal requirements. Laboratories conducting analyses for compliance purposes are required to be accredited and regularly demonstrate their qualifications and performance.

Our “**Internal Laboratory Audits**” workshop explains what internal audits are and why they are essential in maintaining and / or improving your compliance with lab accreditation requirements. We will point out what information you will have to prepare for an audit by the accrediting organization and how you can demonstrate your lab’s capabilities and performance.

We will also discuss helpful tools that will help you conduct your internal audits.

We will provide real life scenarios to describe the challenges commonly observed during accreditation and audits of laboratories performing compliance testing.
