RE: CEU Approval for C-19 training

Good day

I have received a request from our Water and Waste Water departments to seek CEU approval for required training on OSHA's Temporary Standard for COVID-19.

This is a one hour online course. About 45-60 minutes utilizes Oregon OSHA Covid 19 training for employers and an additional 10-15 minutes specifically address City of Hillsboro work practices, protocols and procedures. The training is set up in a manner that does not allow the student to challenge the course and advance too rapidly. Both sections require a short quiz to be completed before the course is completed.

This computer based training is being launched on the City network and Learning and Information Management System (LMS). It is required for all employees, specifically targeting Essential Workers in Water/Wastewater.

Upon completion, the LMS system will provide a list of those who have completed. Our beta testing shows the course can be completed in about 1 hour.

Upon completion, participants are issued a certificate.

Because W/WW operators are considered essential workers and this is mandatory training, we are certain you will find it worthy of CEU approval.

Please let me know if you have any questions
