This page has been intentionally left blank

Incident Command System (ICS) Training for the Water Sector

Incident Command System

Adapted from FEMA IS-100.C

1

Course Welcome

This course will introduce students to the Incident Command System (ICS). This system is used nationwide to manage incidents regardless of size or type.

This is the first in a series of ICS courses for all personnel involved in incident management. Descriptions and details about the other ICS courses in the series may be found on our web site: <http://training.fema.gov>.

2

Course Logistics

- Course agenda
- Sign-in sheet
- Housekeeping:
 - Breaks
 - Cell phone policy
 - Facilities
 - Other concerns

3

Successful Course Completion

- Participate in unit activities/exercises.
- Achieve 75% or higher on the final exam.
- Complete the end-of-course evaluation.

4

Unit 1: Course Overview Introduction to ICS

5

Overall Course Objectives

- Explain the principles and basic structure of the Incident Command System (ICS).
- Describe the NIMS management characteristics that are the foundation of the ICS.
- Describe the ICS functional areas and the roles of the Incident Commander and Command Staff.
- Describe the General Staff roles within ICS.
- Identify how NIMS management characteristics apply to ICS for a variety of roles and discipline areas.

6

Student Introductions

- Name, job title, and organization
- Overall experience with emergency or incident response
- ICS qualifications and most recent ICS experience
- Student expectations

7

7

Instructor Expectations

- Cooperate with the group.
- Be open minded to new ideas.
- Participate actively in all of the training activities and exercises.
- Return to class at the stated time.
- Use what you learn in the course to perform effectively within an ICS organization.

8

8

Unit 1: ICS Overview

Unit 1 provides an overview of the Incident Command System (ICS). At the end of this lesson, you should be able to:

- Describe the Whole Community approach to ICS.
- Identify the basic concept and benefits of ICS.

9

9

Whole Community

Every part of society must be involved in preparing for, protecting against, responding to, recovering from, and mitigating any and all incidents. The Federal Government is only one part of the whole community.

The Whole Community approach ensures solutions that serve the entire community are implemented, while simultaneously making sure that the resources the different members of the community bring to the table are used efficiently. These members include those in all levels of government as well as those in non-governmental and private-sector organizations in fields such as transportation, health care, schools, public works, communications, agriculture, chemical/nuclear, and more.

10

10

What is the ICS?

ICS is a standardized approach to incident management that:

- Is used for all kinds of incidents by all types of organizations and at all levels of government; applicable to small incidents as well as large and complex ones.
- Can be used for emergencies & for planned events.
- Enables a coordinated response among various jurisdictions and agencies.
- Establishes common processes for incident-level planning and resource management.
- Allows for the integration of resources (such as facilities, equipment, personnel) within a common organizational structure.

11

11

When is ICS Used?

- To manage any type of incident, including a planned event (e.g., the Olympics, the Governor's inauguration, state fairs, a local parade, etc.). The use of ICS is applicable to all types of incidents, regardless of their size or cause.
- As a system, ICS provides an organizational structure for incident management, and guides the process for planning, building, and adapting that structure.
- Using ICS for every incident or planned event provides the practice that will help to maintain and improve skills needed to effectively coordinate larger or more complex efforts.

12

12

Incident Command System: Promoting Response Partnerships

13

13

ICS as a Component of the National Incident Management System (NIMS)

NIMS is organized into three major components:

- Resource Management
- Command and Coordination
 - including the Incident Command System
- Communications and Information Management

14

14

Activity: Management Challenges (1 of 2)

Instructions:

- Working as a team, review the scenario presented on the next visual.
- Identify the top three challenges for managing this incident. Write these challenges on chart paper.
- Using what you have learned so far, describe how ICS could be used to address these challenges.
- Select a spokesperson. Be prepared to present in 5 minutes.

15

15

Activity: Management Challenges (2 of 2)

Scenario: An unexpected flash flood has struck a small community. As a result:

- Homes, schools, and the business district have been evacuated.
- Critical infrastructure has been damaged including contamination of the water supply, flooded wastewater pumping stations, downed power lines, and damaged roads.
- Mutual aid and assistance is arriving from several surrounding utilities.

16

16

How can ICS benefit me, a utility?

1. It is a proven system for managing incidents of any kind or size.
2. It is used for emergency response by all local, state, and federal agencies.
3. Allows personnel from a variety of agencies to meld rapidly into a common management structure.
4. It is flexible enough to manage incidents that only involve utility personnel to incidents that require response by several agencies or jurisdictions.
5. Is cost effective by avoiding duplication of efforts.
6. Using ICS is required for NIMS compliance.

17

17

ICS: Built on Best Practices

ICS helps to ensure:

- The safety of responders, community members, and others.
- The achievement of incident objectives.
- The efficient use of resources.

18

18

Unit 1 Summary

You have completed the Course Welcome and Incident Command System (ICS) Overview unit. This unit presented the following key points:

- ICS is a standardized management tool that allows better coordination and use of resources.
- ICS represents organizational best practices and has become the standard for emergency management.
- ICS can be used to manage the response for all incidents and planned events.

ICS works! It saves lives!

19

Course Structure

Unit 1:
Welcome and
ICS Overview

Unit 2:
NIMS Management
Characteristics

Unit 3:
ICS Functional Areas and
Command Staff Roles

Unit 4:
General Staff Roles

Unit 5:
How ICS Applies to You

20

Unit 2: NIMS Management Characteristics

21

Unit 2 Overview

This unit presents the NIMS management characteristics. These characteristics are the foundation of all NIMS command and coordination components, including the Incident Command System (ICS).

22

Making ICS Work

ICS uses a standardized management approach to ensure that incidents are properly managed and communications are effectively coordinated during an incident.

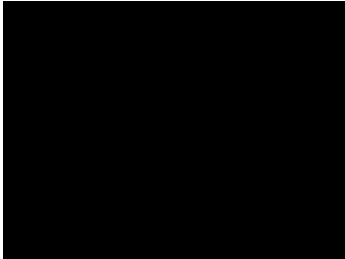

As an incident occurs, you may be called upon to assist -- making you a part of this organizational structure. To ensure success, you should understand how this structure works.

23

NIMS Management Characteristics: Overview

24

NIMS Management Characteristics

ICS is based on the following 14 proven NIMS management characteristics, each of which contributes to the strength and efficiency of the overall system:

- Common Terminology
- Modular Organization
- Management by Objectives
- Incident Action Planning
- Manageable Span of Control
- Incident Facilities and Locations
- Comprehensive Resource Management

- Integrated Communications
- Establishment and Transfer of Command
- Unified Command
- Chain of Command and Unity of Command
- Accountability
- Dispatch/Deployment
- Information and Intelligence Management

25

25

Common Terminology

- Organizational Functions
- Resource Descriptions:
- Incident Facilities:

During an incident:

- Communications should use common terms.
- Organizations should avoid radio codes, agency-specific codes, acronyms, or jargon.
- The goal is to promote understanding among all parties involved in managing an incident.

26

26

Common Terminology Discussion

?

Even if you use codes on a daily basis, why should you use common terminology during an incident response?

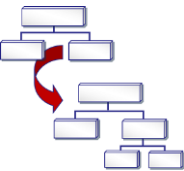

27

27

Modular Organization

- ICS organizational structure develops in a modular fashion based on the incidents size and complexity.
- The responsibility for the establishment and expansion of the ICS modular organization rests with the Incident Commander.
- As the incident grows more complex, the ICS organization may expand as functional responsibilities are delegated.

28

28

Management by Objectives

- ICS is managed by objectives.
- Objectives are communicated throughout the entire ICS organization through the incident planning process.

29

29

Management by Objectives: Steps

The steps for establishing incident objectives include:

- Step 1: Understand agency policy and direction.
- Step 2: Assess incident situation.
- Step 3: Establish incident objectives.
- Step 4: Select appropriate strategy or strategies to achieve objectives.
- Step 5: Perform tactical direction.
- Step 6: Provide necessary follow-up.

30

30

Overall Priorities

Incident objectives are established based on the following priorities:

#1: Life Safety

#2: Incident Stabilization

#3: Property Preservation

31

31

Effective Incident Objectives

Effective incident objectives must be . . .

Specific and state what's to be accomplished.
Measurable.
Action-oriented.
Realistic.
Timely.

32

32

Sample Incident Objectives

Incident: At noon a 4-foot water main breaks in the city's downtown financial district, flooding roadways and businesses. Traffic is gridlocked and many businesses have no water.

Incident Objectives:

- Notify city fire department by 12:15 p.m. and all critical customers downtown by 12:45 p.m.
- Mitigate downtown flooding by the afternoon rush hour.

33

33

Establish Strategies to Achieve Objectives

- Make good sense (feasible, practical, and suitable)
- Be within acceptable safety norms
- Be cost effective
- Be consistent with sound environmental practices.
- Meet political considerations

34

34

Objectives, Strategies, and Tactics

Incident Objectives

State what will be accomplished.

Strategies

Establish the general plan or direction for accomplishing the incident objectives.

Tactics

Specify how the strategies will be executed.

35

35

Sample Objective, Strategies, Tactics & Resources

Objective: Reduce reservoir level to 35 feet by 0800 tomorrow.

Strategy #1: Reduce/divert inflow.

Strategy #2: Release water from spillways.

Selected Strategy: Pump water from reservoir.

Tactics: Use truck-mounted pumps working from the road to pump water into the spillway, and use portable pumps on the east side of the reservoir to discharge water into Murkey Creek.

Resources: 2 strike teams with (3) 1,500-gpm truck-mounted pumps for one team and (2) 500-gpm portable pumps for the other.

36

36

Incident Action Planning

To be effective, an IAP should:

- Cover a specified timeframe
- Be proactive
- Specify the incident objectives
- State the activities to be completed
- Assign responsibilities
- Identify needed resources
- Specify communication protocols

Incident Action Plan

- What do we need to do?
- Who is responsible for doing it?
- What resources are needed?
- How do we communicate?

For smaller/less complex incidents, the IAP may be oral or written, except for hazardous materials incidents, which require a written IAP. FEMA has developed a series of ICS Forms for use in developing a written IAP.

37

Activity: Objectives (1 of 2)

Instructions:

- Working as a team, review the scenario presented on the next visual.
- Based on the information provided, identify the top three incident management objectives. Write these objectives on chart paper.
- Select a spokesperson. Be prepared to present in 5 minutes.

38

Activity: Objectives (2 of 2)

Scenario: An unexpected flash flood has struck a small community. As a result:

- Homes, schools, and the business district have been evacuated.
- Critical infrastructure has been damaged including contamination of the water supply, flooded wastewater pumping stations, downed power lines, and damaged roads.
- Mutual aid and assistance is arriving from several surrounding utilities.

39

Manageable Span of Control

- Depending on your role within ICS structure, you may be asked to manage the activities of others.
- Span of control refers to the number of individuals or resources that one supervisor can manage effectively during an incident.
- The optimal 1:5
- This ratio is a guideline--incident personnel should use their best judgement to determine the appropriate ratio for an incident.

Supervisor

Resource 1

Resource 2

Resource 3

40

Incident Locations & Facilities

Established by the Incident Commander based on the requirements and complexity of the incident.

Incident Command Post

Base

Staging Area

Camp

41

Comprehensive Resource Management

Comprehensive Resource Management describes standard mechanisms to identify requirements, order and acquire, mobilize, track and report, demobilize, and reimburse resources such as personnel, teams, facilities, equipment and supplies.

Identify Requirements

Order and Acquire

Mobilize

Track and Report

Demobilize and Reimburse

42

Water Sector Training

ICS Page 14

Integrated Communications

Incident communications are facilitated through the development and use of a common communications plan and interoperable communication processes and systems that include voice and data links.

Integrated Communications are necessary to:

- Maintain connectivity
- Achieve situational awareness
- Facilitate information sharing

43

43

Transfer of Command (1 of 2)

- Moves the responsibility for incident command from one Incident Commander to another.
- Must include a transfer of command briefing (which may be oral, written, or both).

44

44

Transfer of Command (2 of 2)

Transfer of command occurs when:

- A more qualified person assumes command.
- The incident situation changes over time, resulting in a legal requirement to change command.
- There is normal turnover of personnel on extended incidents.
- The incident response is concluded and responsibility is transferred to the home agency.

45

45

Unified Command

Unified Command:

- Enables all responsible agencies to manage an incident together by establishing a common set of incident objectives and strategies.
- Allows Incident Commanders to make joint decisions by establishing a single command structure.
- Maintains unity of command. Each employee only reports to one supervisor.

The diagram illustrates the Unified Command structure. At the top, three boxes represent the 'Fire Agency', 'Law Agency', and 'Utility'. Red arrows point from each of these boxes down to a central box labeled 'Operations Section Chief'. Below this central box, another set of red arrows points down to a group of four individuals, representing the personnel under the Operations Section Chief's command.

46

Example: Unified Command

A truck carrying hazardous material in 55-gallon barrels is involved in an accident on the bridge that marks the county line. The barrels ejected from the truck land in both counties and in the raw water source for the water treatment plant.

Why might a Unified Command be used to manage this incident?

47

Chain of Command

Chain of command is an orderly line of authority within the ranks of the incident management organization.

The diagram shows a hierarchy of authority. At the top is a box labeled 'Authority'. Below it, a dashed red arrow points to a box, which then has two dashed red arrows pointing down to two separate boxes. To the left of this diagram is a photograph of two men in uniform, one in a fire department uniform and one in a police uniform, standing together.

48

Unity of Command

Under unity of command, personnel:

- Report to only one supervisor.
- Receive work assignments only from their supervisors.

Don't confuse unity of command with Unified Command!

49

Accountability

Effective accountability during incident operations is essential. As part of the Incident Command System (ICS) structure, you will need to abide by agency policies and guidelines and any applicable local, tribal, state, or Federal rules and regulations.

There are several principles you will need to adhere to:

- Check-In/Check-Out
- Incident Action Planning
- Unity of Command
- Personal Responsibility
- Span of Control.
- Resource Tracking

50

Dispatch/Deployment

Resources should be deployed only when requested or when dispatched by an appropriate authority through established resource management systems.

Resources not requested should refrain from self-dispatching to avoid overburdening the incident command.

51

Information and Intelligence Management

Incident management must establish a process for gathering, analyzing, assessing, sharing, and managing incident-related information and intelligence.

In NIMS, "intelligence" refers exclusively to threat-related information developed by law enforcement, medical surveillance, and other investigative organizations.

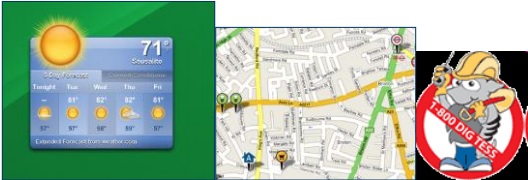

52

52

Information & Intelligence Management

Information and intelligence are critical to incident response.

53

53

Unit 2 Summary

You have completed the National Incident Management System (NIMS) Management Characteristics unit.

This unit introduced:

- Common Terminology
- Modular Organization
- Management by Objectives
- Incident Action Planning
- Manageable Span of Control
- Incident Facilities and Locations
- Comprehensive Resource Management
- Integrated Communications
- Establishment and Transfer of Command
- Unified Command
- Chain of Command and Unity of Command
- Accountability
- Dispatch/Deployment
- Information and Intelligence Management

54

54

Unit 3:

Incident Commander and Command Staff Functions

55

Unit 3 Overview

This unit introduces you to the Incident Command System (ICS) Functional Areas and roles of the Incident Commander and Command Staff.

- Identify the five major ICS functional areas.
- Describe the role of the Incident Commander.
- Describe the selection of and transfer of command between Incident Commanders.
- Identify the position titles associated with the Command Staff.
- Describe the roles of the Command Staff.
- Differentiate between incident command and incident coordination.

56

Command Staff Overview - Video

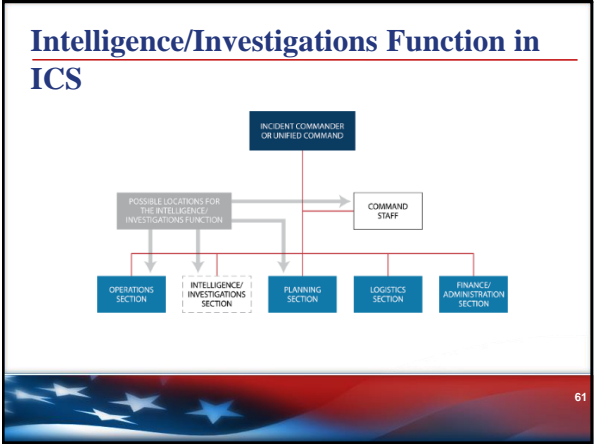

57

58

59

60

61

Review of Functional Areas (1 of 5)

?

Which ICS Functional Area supports the incident action planning process by tracking resources, collecting/analyzing information, and maintaining documentation?

62

62

Review of Functional Areas (2 of 5)

?

Which ICS Functional Area sets the incident objectives, strategies, and priorities, and has overall responsibility for the incident?

63

63

Review of Functional Areas (3 of 5)

?

Which ICS Functional Area conducts operations to reach the incident objectives, establishes tactics, and directs all operational resources?

64

64

Review of Functional Areas (4 of 5)

?

Which ICS Functional Area monitors costs related to the incident and provides accounting, procurement, time recording, and cost analyses?

65

65

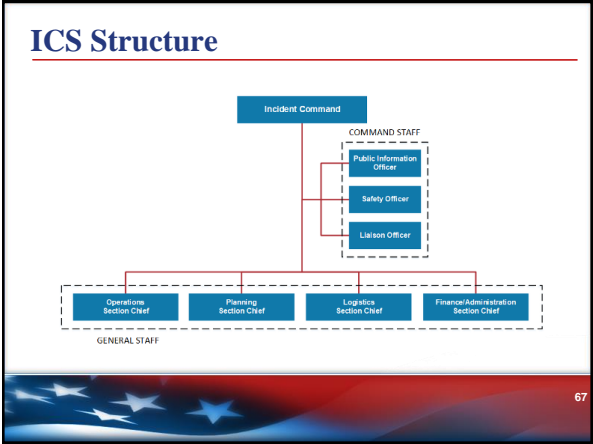

Review of Functional Areas (5 of 5)

?

Which ICS Functional Area arranges for resources and needed services to support achievement of the incident objectives?

66

66

67

Incident Command Definition

- NIMS defines command as the act of directing, ordering, or controlling by virtue of explicit statutory, regulatory, or delegated authority.
- The Incident Commander has the authority to establish objectives, make assignments, and order resources.
- The Incident Commander should have the training, experience, and expertise to serve in this capacity.
- Qualifications to serve as an Incident Commander should not be based solely on rank, grade, or technical knowledge.

68

Incident Commander

- Responsible for the overall management of the incident
- Makes Command Staff assignments required to support the incident command function
- The only position that is always staffed in ICS applications
- On small incidents and events, one person-the Incident Commander-may accomplish all management functions

69

70

70

71

71

72

72

73

73

74

74

75

75

76

77

78

Knowledge Review (3 of 3)

Instructions: Identity which member of the Command Staff performs the following tasks.

Tasks:

- Serves as point of contact for assisting and cooperating agency representatives.
- Identifies problems between supporting agencies.
- Participates in planning meetings by providing the status on current resources, resource limitations, and resource capabilities of other agencies.

79

Activity: Command Staff Roles (1 of 2)

Instructions:

- Working as a team, review the scenario presented on the next visual.
- Identify which Command Staff positions would be assigned.
- Next, if you were the Incident Commander, what specific activities would you delegate to each Command Staff member?
- Select a spokesperson. Be prepared to present in 10 minutes.

80

Activity: Command Staff Roles (2 of 2)

Scenario: An unexpected flash flood has struck a small community. As a result:

- Homes, schools, and the business district have been evacuated.
- Critical infrastructure has been damaged including contamination of the water supply, flooded wastewater pumping stations, downed power lines, and damaged roads.
- Mutual aid and assistance is arriving from several surrounding utilities.
- Media representatives are arriving at the scene.

81

Incident Coordination

Coordination involves the activities that ensure the onsite Incident Command System (ICS) organization receives the information, resources, and support needed to achieve those incident objectives. Coordination takes place in a number of entities and at all levels of government.

Examples of coordination activities include:

- Establishing policy based on interactions with agency executives, other agencies, and stakeholders.
- Collecting, analyzing, and disseminating information to support the establishment of shared situational awareness.
- Establishing priorities among incidents.
- Resolving critical resource issues.
- Facilitating logistics support and resource tracking.
- Synchronizing public information messages to ensure that everyone is speaking with one voice.

82

82

Command and Coordination

Effective incident management consists of four overarching areas of responsibility:

1. Direct tactical response to save lives, stabilize the incident, and protect property and the environment
2. Incident support through resource acquisition, information gathering, and interagency coordination
3. Policy guidance and senior level decision making
4. Outreach and communication with the media and public to keep them informed about the incident

83

83

Emergency Operations Center Role

Jurisdictions and organizations across the Nation use Emergency Operations Centers (EOCs) as an element of their emergency management programs.

Typically, an Emergency Operations Center (EOC) supports the on-scene response by relieving the Incident Commander of the burden of external coordination and the responsibility for securing additional resources.

84

84

Emergency Operations Center Role

An EOC is:

- A physical or virtual location where staff from multiple agencies come together to address imminent threats and hazards
- Staffed with personnel trained for, and authorized to, represent their agency/discipline
- Equipped with mechanisms for communicating with the incident site
- Providing support to the incident by obtaining resources
- Applicable at different levels of government

85

85

Joint Information Center

Another coordination entity is the Joint Information Center (JIC). The JIC:

- May be established to coordinate all incident-related public information activities
- Serves as the central point of contact for all news media-when possible, public information officials from all participating agencies should co-locate at the JIC
- May be established at various levels of government and at incident sites.

86

86

Unit 3 Summary

This unit introduced you to the:

- Five major Incident Command System (ICS) Functional Areas.
- ICS organizational structure.
- Incident Commander roles and responsibilities.
- Selection and transfer of Incident Commanders.
- Command Staff roles and responsibilities.
- Differences between incident command and incident coordination.

The next unit provides an introduction to the ICS General Staff Roles.

87

87

Unit 4:

General Staff Functions

88

88

Lesson 4 Overview

In the previous unit, you learned that the Command Staff supports the Incident Commander who is responsible for overall management of the incident.

This unit introduces you to the General Staff.

By the end of this unit, you should be able to:

- Identify the Incident Command System (ICS) titles used for General Staff members.
- Describe the major activities of the four general staff sections.

89

89

Incident Commander (2 of 2)

The Incident Commander performs all major ICS command and staff responsibilities unless the ICS functions are delegated and assigned.

Incident Commander

Public Information Officer

Liaison Officer

Safety Officer

Operations Section Chief

Planning Section Chief

Logistics Section Chief

Finance/Admin Section Chief

Command Staff

General Staff

90

90

General Staff

To maintain span of control, the Incident Commander may establish any or all of the following four sections: Operations, Planning, Logistics, and Finance/Administration.

```
graph TD; IC[Incident Commander] --- OS[Operations Section]; IC --- PS[Planning Section]; IC --- LS[Logistics Section]; IC --- FAS[Finance/Administration Section];
```

91

91

General Staff Overview

In an expanding incident, the Incident Commander first establishes the Operations Section. The remaining sections are established as needed to support the operation.

```
graph TD; IC[Incident Commander] --- OS[Operations Section]; IC --- PS[Planning Section]; IC --- LS[Logistics Section]; IC --- FAS[Finance/Administration Section];
```

92

92

General Staff Overview Video

93

93

Operations Section Chief

Operations Section Chief

The Operations Section Chief:

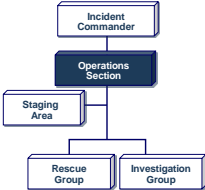

- Develops and implements strategy and tactics to carry out the incident objectives.
- Organizes, assigns, and supervises the tactical field resources.
- Supervises air operations and those resources in a Staging Area.

94

Operations Section

The Operations Section:

- Directs and coordinates all incident tactical operations.
- Is typically one of the first organizations to be assigned to the incident.
- Expands from the bottom up.
- Has the most incident resources.
- May have Staging Areas and special organizations.

```
graph TD; IC[Incident Commander] --> OS[Operations Section]; OS --> SA[Staging Area]; OS --> RG[Rescue Group]; OS --> IG[Investigation Group]
```

95

Unit Objective

Describe the roles and functions of the General Staff including:

- Operations Section
- Planning Section
- Logistics Section
- Finance/ Administration Section

96

Expanding Incidents

Expanding incidents may add supervisory layers to the organizational structure as needed.

The diagram illustrates the expansion of an incident's organizational structure. At the top is the **Command** level, represented by the Incident Commander. Below is the **Sections** level, with the Operations Section Chief. The **Branches** level follows, which can further divide into **Divisions** (labeled A and B) or **Groups**. These then lead to **Units**, which are composed of **Single Resources**. The background features a stylized American flag.

97

General Staff

This unit focuses on the role of the General Staff in the ICS organizational structure.

The diagram shows the Incident Commander at the top. Reporting to the Incident Commander are the **Command Staff**, which includes the Public Information Officer, Liaison Officer, and Safety Officer. Below the Incident Commander are the **General Staff**, which includes the Operations Section, Planning Section, Logistics Section, and Finance/Admin Section. The background features a stylized American flag.

98

Maintaining Span of Control

The following supervisory levels can be added to help manage span of control:

Divisions

Divide an incident geographically.

Groups

Describe functional areas of operation.

Branches

Are used when the number of Divisions or Groups exceeds the span of control. Can be either geographical or functional.

99

Operations Section: Divisions

- Divided geographically based on the needs of the incident.
- Labeled using alphabet characters (A, B, C, etc.).
- Managed by a Supervisor.

The diagram illustrates the structure of the Operations Section when divided into divisions. At the top, a dark blue box labeled "Operations Section" is connected by lines to two white boxes labeled "Division A" and "Division B". Below these boxes is a map of a building layout with red lines indicating paths or zones. The letters "A" and "B" are placed on the map to indicate the geographical areas assigned to each division. The slide has a decorative American flag graphic at the bottom and the number "100" in the bottom right corner.

100

Operations Section: Groups

- Established based on the needs of an incident.
- Labeled according to the job that they are assigned.
- Managed by a Supervisor.
- Work wherever their assigned task is needed and are not limited geographically.

The diagram shows the structure of the Operations Section when organized into groups. A dark blue box labeled "Operations Section" is connected by lines to two white boxes labeled "Health & Safety Group" and "Public Works Group". The slide has a decorative American flag graphic at the bottom and the number "101" in the bottom right corner.

101

Operations Section: Divisions & Groups

Divisions and Groups:

- Can be used together on an incident.
- Are at an equal level in the organization. One does not supervise the other.

The diagram illustrates a combined structure for the Operations Section. A dark blue box labeled "Operations Section" is connected by lines to four white boxes: "Division A (East Side)", "Division B (West Side)", "Health & Safety Group", and "Public Works Group". Below the "Public Works Group" box, two more white boxes are connected: "Electric Utilities Specialist" and "Water Sanitation Specialist". The slide has a decorative American flag graphic at the bottom and the number "102" in the bottom right corner.

102

Operations Section: Branches

- Established if the number of Divisions or Groups exceeds the span of control.
- Have functional or geographical responsibility for major parts of incident operations.
- Identified by Roman numerals or functional name.
- Managed by a Branch Director.

Operations Section

Emergency Services Branch

Health & Medical Group

Shelter & Mass Care Group

Law Enforcement Branch

Perimeter Control Group

Investigation Group

Public Works Branch

Debris Removal Group

Utility Repair Group

103

103

Operations Section: Task Forces

Operations Section

Task Force

Strike Team

Single Resource

Task Forces are a combination of mixed resources with common communications operating under the direct supervision of a Task Force **Leader**

104

104

Operations Section: Strike Teams

Operations Section

Task Force

Strike Team

Single Resource

Strike Teams are a set number of resources of the same kind and type with common communications operating under the direct supervision of a Strike Team **Leader**

105

105

Operations Section: Single Resources

Operations Section

Task Force

Strike Team

Single Resource

Single Resources may be:

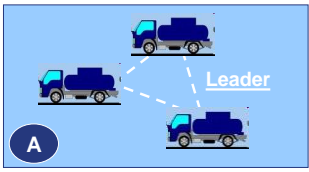

- Individuals
- A piece of equipment and its personnel complement
- A crew or team of individuals with an identified supervisor

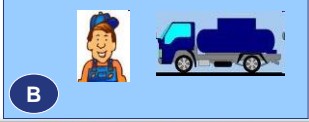

106

106

Name That Resource . . .

A

B

C

107

107

Use of Position Titles

Using specific ICS position titles:

- Provides a common standard for performance expectations.
- Helps to ensure that qualified individuals fill positions.
- Standardizes communication.
- Describes the responsibilities of the position.

108

108

Knowledge Review (1 of 5)

Two Supervisors have been dispatched with resources (personnel and equipment) to inspect fire hydrants in the incident area. One Supervisor has responsibility for the east side of the community and the other has responsibility for the west side.

What type of ICS organizational structure is being described?

109

109

Knowledge Review (2 of 5)

Several utility crews have been organized under a single Supervisor in order to coordinate their repairs of pumping stations.

What type of ICS organizational structure is being described?

110

110

Knowledge Review (3 of 5)

Chemical and biological sampling personnel and their respective equipment are grouped together, under the direct supervision of a Leader, to perform water quality testing.

What type of ICS organizational structure is being described?

111

111

Knowledge Review (4 of 5)

As incident objectives and resources expand, the Operations Section Chief begins organizing resources into functional areas that are managed by a Supervisor.

```
graph TD; OS[Operations Section] --> WU[Water Utility ?]; OS --> PU[Power Utility ?];
```

On the organizational chart, the title of each component would be a _____.

112

Knowledge Review (5 of 5)

As the operation expands even further, the Operations Section Chief appoints a Director to manage the Groups.

```
graph TD; OS[Operations Section] --> CI[Critical Infrastructure]; CI --> RBG[Roads and Bridges Group]; CI --> WUG[Water Utility Group]; CI --> PUG[Power Utility Group];
```

On the organizational chart, the name of the organizational component managed by the Director would be called the Critical Infrastructure _____.

113

Planning Section Chief

Planning Section Chief

The Planning Section Chief:

- Gathers, analyzes, and disseminates information and intelligence.
- Manages the planning process.
- Compiles the Incident Action Plan.
- Manages Technical Specialists.

114

Planning Section

- Maintains resource status.
- Maintains and displays situation status.
- Prepares the Incident Action Plan.
- Develops alternative strategies.
- Provides documentation services.
- Prepares the Demobilization Plan.
- Provides a primary location for Technical Specialists assigned to an incident.

115

115

Planning Section: Resources Unit

- Conducts all check-in activities and maintains the status of all incident resources.
- Plays a significant role in preparing the written Incident Action Plan.

116

116

Planning Section: Situation Unit

- Collects and analyzes information on the current situation.
- Prepares situation displays and situation summaries.
- Develops maps and projections.

117

117

Planning Section: Documentation Unit

Planning Section

- Resources Unit
- Situation Unit
- Demobilization Unit
- Documentation Unit

- Provides duplication services, including the written Incident Action Plan.
- Maintains and archives all incident-related documentation.

118

Planning Section: Demobilization Unit

Planning Section

- Resources Unit
- Situation Unit
- Demobilization Unit
- Documentation Unit

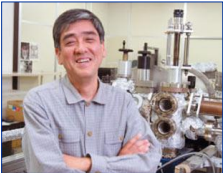

Assists in ensuring that resources are released from the incident in an orderly, safe, and cost-effective manner.

119

Planning Section: Technical Specialists

- Provide special expertise useful in incident management and response.
- May be assigned to work in the Planning Section or in other Sections.

123

Logistics Section Chief

Logistics Section Chief

The Logistics Section Chief:

- Provides resources and services required to support incident activities.
- Develops portions of Incident Action Plan and forwards them to Planning Section.
- Contracts for and purchases goods and services needed at the incident.

124

124

Logistics Section

Responsible for:

- Communications.
- Medical support to incident personnel.
- Food for incident personnel.
- Supplies.
- Facilities.
- Ground support.

Unit 4 Summary

This unit introduced you to:

- The Incident Command System (ICS) roles of the General Staff.
- The major activities of the four ICS General Staff sections.

The next unit focuses on how the ICS applies to you and your agency or organization.

135

135

Unit 5:

How ICS Applies to You

136

136

Unit 5 Overview

In this unit, you will be given an opportunity to apply information presented in the previous units.

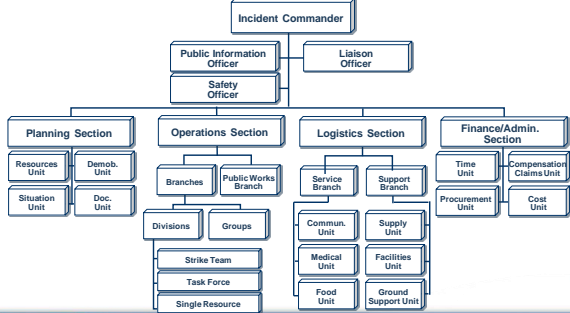

You will be given a scenario involving a water main break and you will be asked to select which NIMS Management Characteristics are demonstrated throughout the scenario.

By the end of this unit, you should be able to:

- Identify how the National Incident Management System (NIMS) Management Characteristics apply in specific roles.
- Identify how the National Incident Management System (NIMS) Management Characteristics apply in specific situations.

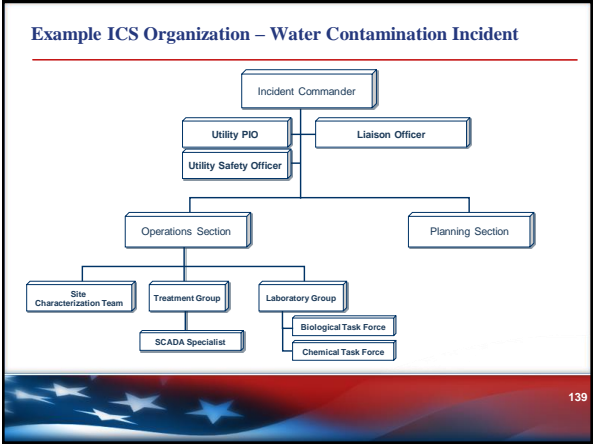

137

Expanded ICS Organization

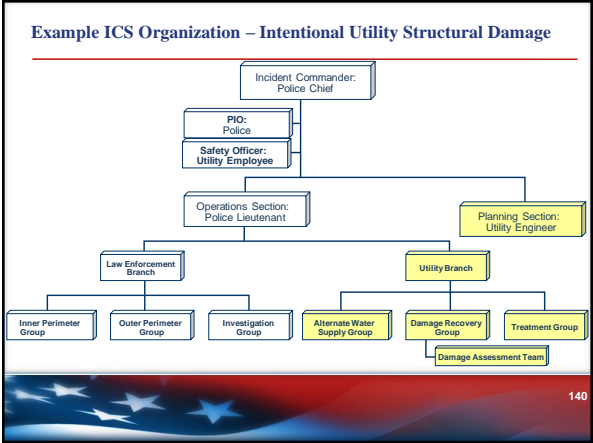

138

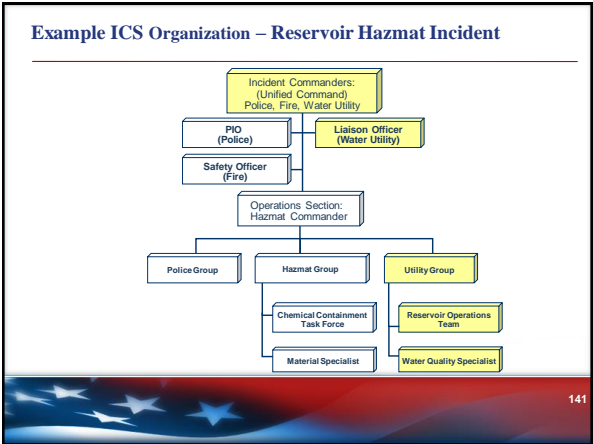

138

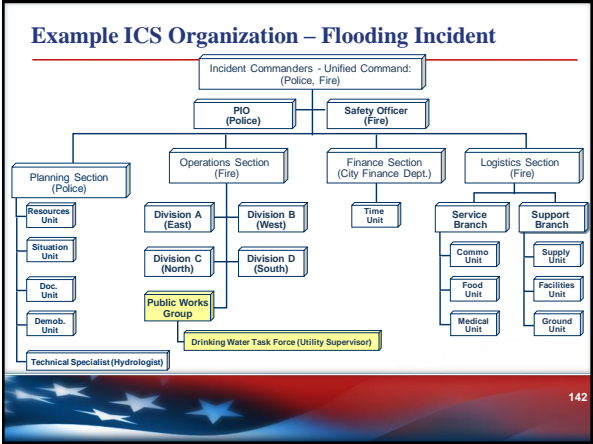

139

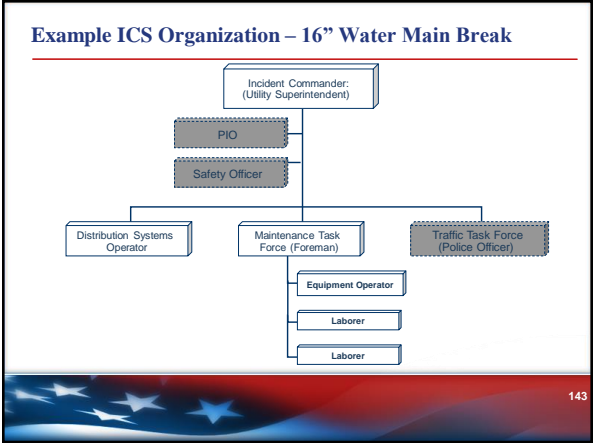

140

141

142

143

General Staff Functions: Case Study (1 of 7)

Instructions: Read the scenario below and then answer the question.

The Scenario: At 4:30 a.m. a 3rd shift factory worker calls the police department to report water bubbling out of a crack on Main Street. A local police officer arrives at the scene, establishing the initial ICS organization.

?
(Police Officer Unit 1)

In the ICS organization described above, Police Officer Unit 1 has assumed which role?

144

144

General Staff Functions: Case Study (2 of 7)

The Scenario Continues:
A water department foreman arrives at the scene, along with news crews and numerous on-lookers.

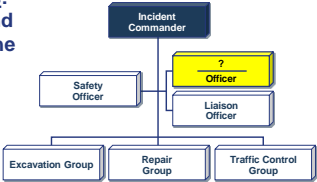

What must happen before the foreman assumes the Incident Commander role?

145

145

General Staff Functions: Case Study (3 of 7)

The Scenario Continues:
A transfer of command briefing occurs and the water department foreman assumes the Incident Commander role. All Command Staff positions are filled.

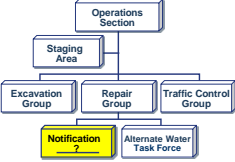

What is the correct title of the Command Staff member who will manage the media and ensure that the correct messages are communicated?

146

146

General Staff Functions: Case Study (4 of 7)

The Scenario Continues: The Incident Commander establishes an Operations Section. Within the Repair Group, four direct notification teams are assigned to inform customers of the service interruption. The teams have identical resources. The teams are using common communications and are operating under the direct supervision of a Leader.

What is the correct title of this organization? If the resources continue to expand, what might the Operations Section Chief do?

147

147

General Staff Functions: Case Study (5 of 7)

The Scenario Continues:
After the first hour, the Incident Commander establishes a second Section that will develop the Incident Action Plan and track the status of resources on the scene.

Incident Commander

Safety Officer

Public Information Officer

Liaison Officer

Operations Section

? Section

What is the correct title of this Section?

148

148

General Staff Functions: Case Study (6 of 7)

The Scenario Continues:
As night falls, more than 50 personnel are on the scene to help repair the water main break. Given the number of personnel on the scene, there is a need to provide meals, food, first aid, and rest areas for responders.

Which Section is responsible for providing these support resources?

149

149

General Staff Functions: Case Study (7 of 7)

The Scenario Continues:
Just before morning rush hour the water main is repaired and a temporary road surface is in place.

Which resources would you demobilize first? Why?

150

150

Activity #1: ICS Structure

Instructions:

1. This activity will help you to create your own draft ICS structure within your organization.
2. Within your group, you will each now have 10 minutes to diagram your utility's basic ICS structure.
3. Select one group member to present his or her utility's ICS structure to the class.

151

151

Activity #1

Incident Commander

152

152

Unit 5 Summary

You have now completed Unit 5.

In this unit you have:

- Identified how the National Incident Management System (NIMS) Management Characteristics apply in specific roles
- Identified how the National Incident Management System (NIMS) Management Characteristics apply in specific situations

153

153

Course Summary

You have now completed this course.

You should now be able to:

- Explain the principles and basic structure of the Incident Command System (ICS).
- Describe the NIMS Management Characteristics that are the foundation of ICS.
- Describe the ICS functional areas and the roles of the Incident Commander and Command Staff.
- Describe the General Staff roles within ICS.
- Identify how NIMS management characteristics apply to ICS for a variety of roles and discipline areas.

154

154

IS-100.c Final Exam Instructions

When the review is completed, follow these Final Exam instructions:

1. Take a few moments to review your Student Manual and identify any questions.
2. Make sure that you get all of your questions answered prior to beginning the final test.
3. When taking the test online
 - Go to <http://training.fema.gov/IS/crslist.asp> and click on the link for IS-0100.c.
 - Click on "Take Final Exam."
 - Read each item carefully.
 - Check your work before submitting your answers.

155

155

Certificate of Completion

To receive a certificate of completion, you must take the multiple-choice Final Exam and score at least 75 percent on the test.

Upon successful completion of the Final Exam, you will receive an e-mail message with a link to your electronic certification.

156

156

Course Evaluation

Completing the course evaluation form is important. Your comments will be used to evaluate the effectiveness of this course and make changes for future versions.

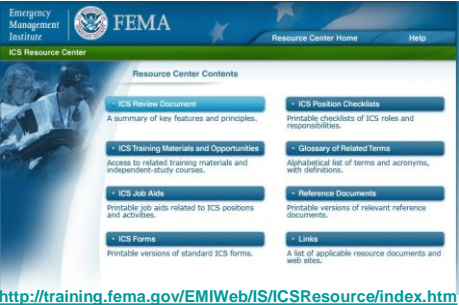

Please use the course evaluation forms provided by the organization sponsoring the course.

157

157

For Additional ICS Resources:

<http://training.fema.gov/EMIWeb/IS/ICSResource/index.htm>

158

158

FEMA Student Identification (SID) number

How do I obtain my FEMA Student Identification (SID) number?

Step 1: To register, go to <https://cdp.dhs.gov/femasid>

Step 2: Click on the "Register for a FEMA SID" box.

Step 3: Follow the instructions and provide the necessary information to create your account.

Step 4: You will receive an email with your SID number.

(You should save this number in a secure location.)

When you begin the exam process you will be asked to enter your SID.

159

159

On-Line Exam Instructions

1. Paste the below link into your web browser:
<https://training.fema.gov/is/courseoverview.aspx?code=IS-100.c>
2. On right hand side, click on "Take Final Exam Online".
3. Fill in the appropriate letters for each corresponding exam question number based on your hard copy test. Remember that test questions and answer may be scrambled online.
4. Follow the online directions.
5. Once submitted, your exam will be graded. If you pass EMI will send you an electronic completion certificate.

160

160

IS-100.C: Introduction to the Incident Command System, ICS 100

IS Home

Course Date: 05/20/16

IS Course List

Register for a FEMA IS-C

Course Overview

ICS 100: Introduction to the Incident Command System, introduces the Incident Command System (ICS) and provides the foundation for higher level ICS training. This course describes the history, features and principles, and organizational structure of the Incident Command System. It also explains the relationship between ICS and the National Incident Management System (NIMS). The Emergency Management Institute developed its ICS courses collaboratively with:

- National Incident Coordinating Group (NICG)
- U.S. Department of Agriculture
- United States Fire Administration's National Fire Protection Branch

Course Objectives:

At the completion of this course, you should be able to:

- Explain the principles and basic structure of the Incident Command System (ICS)
- Describe the NIMS management characteristics that are the foundation of the ICS
- Describe the ICS functional areas and the roles of the Incident Commander and Command Staff
- Describe the General Staff roles within ICS
- Identify how NIMS management characteristics apply to ICS for a

National Incident Management System (NIMS) Training for the Water Sector

Adapted from FEMA IS-700

1

1

Course Logistics

- Course agenda
- Sign-in sheet
- Housekeeping:
 - Breaks
 - Cell phone policy
 - Facilities
 - Other concerns

2

2

Successful Course Completion

- Participate in unit discussions
- Achieve 75% or higher on the final exam
- Complete the end-of-course evaluation

3

3

Participant Introductions

- Name, job title, and organization
- Overall experience with emergency or incident response
- ICS qualifications and most recent ICS experience
- Participant Expectations

4

Instructor Expectations

- Cooperate with the group.
- Be open minded to new ideas.
- Participate actively in all of the training activities and exercises.
- Return to class at the stated time.
- Use what you learn in the course to perform effectively within an ICS organization.

5

Course Objectives

Describe:

- The intent of NIMS.
- The key concepts and principles underlying NIMS.
- The purpose of the NIMS components.
- NIMS implementation for the Water Sector.

6

Course Overview – Lessons List

- NIMS Introduction
- Lesson 1: Fundamentals and Concepts of NIMS
- Lesson 2: NIMS Resource Management
- Lesson 3: NIMS Management Characteristics
- Lesson 4: Incident Command System (ICS)
- Lesson 5: Emergency Operations Centers (EOC)
- Lesson 6: Other NIMS Structures and Interconnectivity
- Lesson 7: Communications and Information Management
- Lesson 8: Course Summary

7

Fundamentals and Concepts of NIMS

Lesson 1 Objectives:

- Describe applicability and scope of NIMS.
- Describe the key concepts and principles underlying NIMS.

8

NIMS Synopsis

WHAT? The National Incident Management System (NIMS) defines the comprehensive approach guiding...

WHO? ...the whole community

WHY? ...to prevent, protect against, mitigate, respond to, and recover from the effects of incidents.

WHEN? NIMS applies to all incidents, regardless of cause, size, location, or complexity, from planned events to traffic accidents and to major disasters.

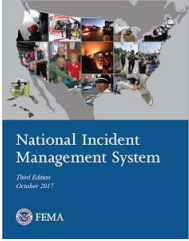

HOW? NIMS provides the shared vocabulary, systems, and processes to successfully deliver the National Preparedness System capabilities.

10

History of NIMS?

- Builds on best practices from more than 40 years of improving interoperability in incident management.
- In 1982 NIMS was developed through government collaboration with incident management practitioners, NGOs and the private sector based on California firefighting system (FIREScope).

11

Water Sector: NIMS Implementation Objectives

- Incorporate NIMS/ICS into ERPs
- WARN membership
- Complete appropriate level ICS training
- Participate in all-hazards training with response partners
- Inventory and type resources
- Credentialing
- Use ICS, JIS, & local EOC

13

NIMS Overview (1 of 2)

NIMS Is	NIMS Is Not
<ul style="list-style-type: none">A comprehensive, nationwide, systematic approach to incident management, including:<ul style="list-style-type: none">Command and Coordination of IncidentsResource ManagementInformation ManagementA set of concepts and principles for all threats, hazards, and events across all mission areasScalable, flexible, and adaptable; used for all incidents, from day-to-day to large-scale	<ul style="list-style-type: none">Only the Incident Command SystemOnly applicable to certain emergency/incident response personnelA static systemA response planUsed only during large-scale incidents

14

NIMS Overview (2 of 2)

NIMS Is	NIMS Is Not
<ul style="list-style-type: none">Standard resource management procedures that enable coordination among different jurisdictions or organizationsEssential principles for communications and information management	<ul style="list-style-type: none">A resource ordering systemA communications plan

15

15

NIMS Concepts and Guiding Principles

- Flexibility
- Standardization
- Unity of Effort

16

16

Flexibility

NIMS components scalable and applicable to any incident or event.

Planned Events

Forecasted Events

No-Notice Events

17

17

Standardization

- The NIMS guiding principle of standardization supports interoperability among multiple organizations in incident response.
- NIMS defines **standard organizational structures** that improve integration and connectivity among organizations.
- NIMS defines **standard practices** that allow incident personnel and organizations to work together effectively.
- NIMS includes **common terminology**, which enables effective communication.

18

Unity of Effort

The NIMS guiding principle of Unity of Effort means coordinating activities among various organizational representatives to achieve common objectives.

Unity of effort enables organizations with jurisdictional authority or functional responsibilities to support each other while allowing each participating agency to maintain its own authority and accountability.

19

NIMS Major Components

```
graph TD; FEMA[National Incident Management System  
FEMA] --- RM[Resource Management]; FEMA --- CC[Command and Coordination]; FEMA --- CIM[Communications and Information Management];
```

20

Fundamentals and Concepts of NIMS

Lesson 1
Summary

The lesson specifically discussed:

- An Introduction and Background to NIMS
- NIMS Applicability and Scope
- NIMS Guiding Principles
- An Overview of the NIMS components

21

NIMS Resource Management

Lesson 2
Objectives:

- Describe the four key activities of NIMS Resource Management Preparedness.
- Identify the methods for Managing Resources during an Incident.
- Describe features of Mutual Aid.

22

Resource Management Key Activities

Resource management preparedness involves four key activities:

- Qualifying, certifying, and credentialing personnel
- Resource Planning and Management
- Identifying and Typing Resources
- Acquiring, storing, and inventorying resources

24

Qualifying, Certifying and Credentialing Personnel

- The **Authority Having Jurisdiction (AHJ)** has the authority and responsibility for qualification, certification, and credentialing within its organization or jurisdiction.
- Qualification, certification, and credentialing are the essential steps to help ensure that personnel deploying under mutual aid agreements can perform their assigned roles.

25

25

Resource Planning and Management

Resource management planning should consider resources needed to support all mission areas:

- Prevention
- Protection
- Mitigation
- Response
- Recovery

27

27

Resource Management Strategies

- Stockpiling resources
- Establishing mutual aid agreements to obtain resources from neighboring jurisdictions
- Determining how and where to reassign resources performing non-essential tasks
- Developing contracts to acquire resources from vendors

28

28

Resource Planning and Management Overview

29

29

Identify Requirements

30

30

Resource Identifying and Typing

- Standardize identification.
- Classify by capability / performance:
 - Kind (what is this?) and;
 - Type (what can it do?)

31

31

Resource Typing

When is a

an

?

Water Sector Resource Typing Example

RESOURCE: WATER DISTRIBUTION SYSTEM DAMAGE ASSESSMENT AND REPAIR TEAM AWWA April 2008

Acquiring, Storing and Inventorying Resources

Accurate resource inventories:

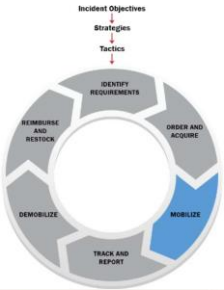

- Enable organizations to resource incidents promptly when needed
- Support day-to-day resource management

In NIMS, resource inventorying refers to preparedness activities conducted **outside** of incident response; resource tracking occurs during an incident.

35

Mobilize

36

Upon receiving notification, deploying personnel receive information to include:

Mobilize

- Date, time, and place of departure
- Mode of transportation to the incident
- Estimated date and time of arrival
- Reporting location and assigned supervisor
- Anticipated incident assignment
- Anticipated duration of deployment
- Resource order number
- Incident number
- Applicable cost and funding codes

37

Unrequested Resources

During incidents responders sometimes arrive at the incident site without being requested.

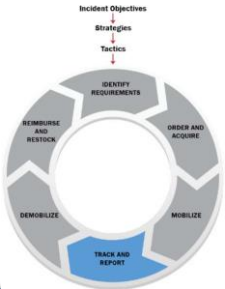

Responders should wait for official deployment notification from established channels rather than self-deploying to an incident.

Why you should avoid self deployment ?

38

Track and Report

39

Track and Report

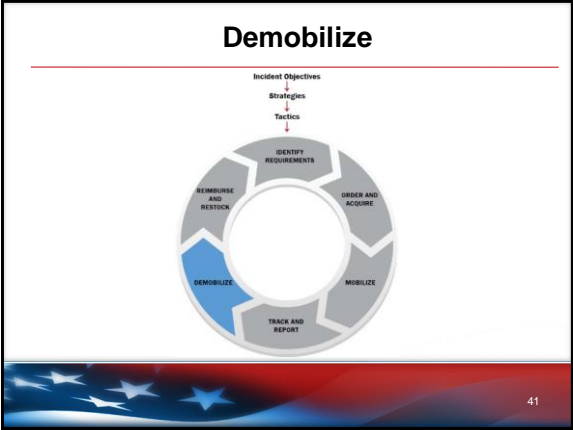

Incident personnel should track resources from mobilization through demobilization using established resource tracking procedures to:

- Tracks the location of resources
- Helps staff prepare to receive and use resources
- Protects the safety and security of personnel, equipment, teams and facilities
- Enables resource coordination and movement

How does your utility track resources?

40

41

Demobilize

- Managers begin planning and preparation for the demobilization process at the same time they begin mobilizing resources.
- Those responsible for resources in an incident should either reassign or demobilize resources as soon as they are no longer needed.

42

42

Reimburse and Restock

Reimbursement processes:

- Establish and maintain the readiness of resources
- Collect bills and validate costs
- Ensure that resource providers are paid in a timely manner
- Restock through replacement or repair of damaged equipment

43

43

Mutual Aid Agreements and Compacts

Mutual aid agreements establish the legal basis for two or more entities to share resources.

Agreements may authorize mutual aid:

- Between two or more neighboring communities
- Among all jurisdictions within an state
- Between States, Territories and Tribal Governments
- Between Federal agencies
- Internationally
- Between government and NGOs and/or the private sector
- Among NGOs and/or private sector entities

45

45

Discussion Questions

What agreements does your organization have in place?

What actions has your organization taken to strengthen those agreements?

46

46

Benefits of Having an Agreement

- Increases planning & coordination
- Provides an emergency contact list
- Enhances access to specialized resources
- Expedites arrival of aid
 - FEMA is muscular and provides support, but is not agile
- Reduces administrative conflict
 - Signed agreement in place
 - Workman's comp, indemnification, etc. identified
- Increases community and customer hope
 - The right resources with the right skills are available

47

47

Intrastate Mutual Aid Agreements:
Water/Wastewater Agency Response Networks

- Provide the means for one utility to provide resources or other support to another utility during an incident
- The overall goal is to ensure timely assistance during incidents
- Includes public AND private utilities
- Operates utility-to-utility for small, local or large events
- Reduces the response “gap” for large emergencies

48

Interstate Mutual Aid Agreements:
Emergency Management Assistance Compact (EMAC)

EMAC is a congressionally ratified mutual aid compact that defines a non-Federal, state-to state system for sharing resources across state lines during an emergency or disaster. Signatories include all 50 states, the District of Columbia, Puerto Rico, Guam, and the U.S. Virgin Islands. EMAC enables the movement of a wide variety of resources to meet the needs of impacted jurisdictions.

49

Group Activity: Determining the Resource Requirements To Manage an Incident

1. View the cascading effects diagram to choose a potential consequence resulting from a power outage at a water utility.
2. Use the Personnel, Equipment, and Supplies Worksheet to identify resource requirements for your chosen event under catastrophic conditions.
3. Determine where those resources would come from.
4. Be prepared to discuss your worksheets with the class.

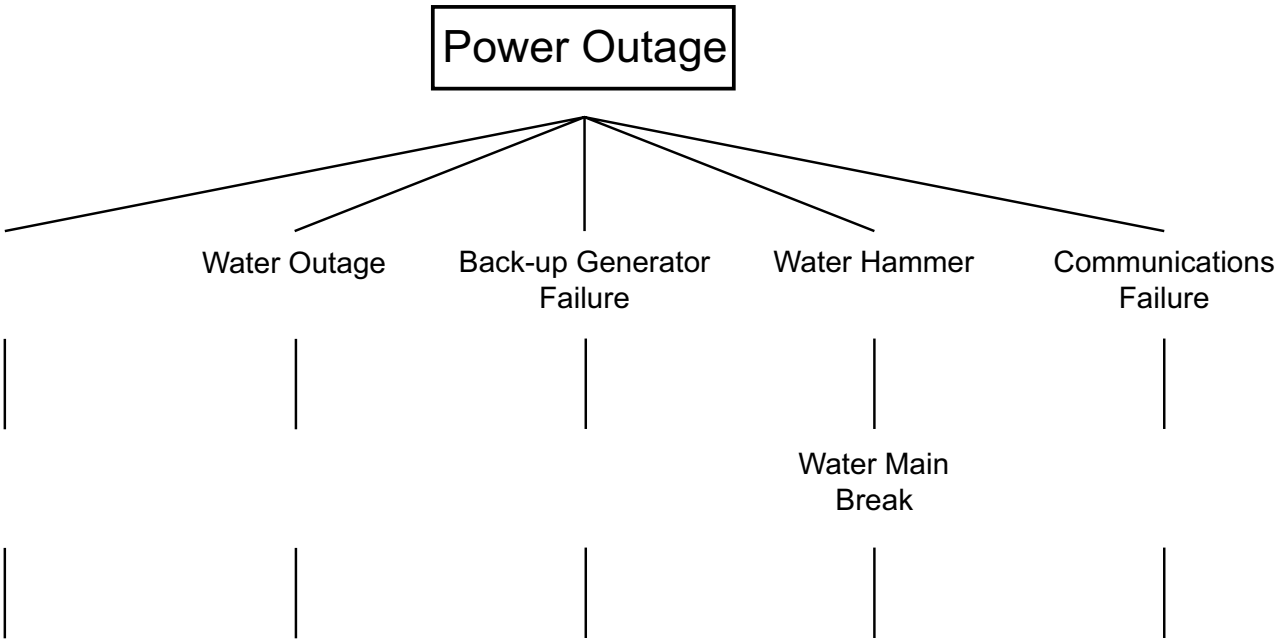

50

Activity: Incident Analysis for Resource Management

Instructions: The diagram below shows some of the potential consequences of an extended power outage. Choose one of the consequences, then, on the worksheet that follows, determine the likely resource requirements for responding to that consequence. Assume that the consequences are catastrophic.

Don't forget to list the sources (providers) for the resources you identify. If you prefer, you may consider a different disaster (e.g., hurricane, tornado) as you complete this activity.

Consequences from One Triggering Incident

NIMS Resource Management

Lesson 2
Summary

The lesson specifically discussed:

- Resource Management Preparedness
- Resource Management During an Incident
- Mutual Aid

The next lesson will introduce you to NIMS Management Characteristics.

51

NIMS Management Characteristics

Lesson 3
Objective:

- Differentiate among the fourteen NIMS Management Characteristics

57

NIMS Management Characteristics

Common Terminology	Modular Organization	Management by Objectives	Comprehensive Resource Management
Incident Action Planning	Manageable Span of Control	Incident Facilities and Locations	Chain of Command and Unity of Command
Integrated Communications	Establishment and Transfer of Command	Unified Command	Information and Intelligence Management
	Accountability	Dispatch/Deployment	

58

Water Sector Training

NIMS-700 Page 16

Common Terminology

Common Terminology covers:

- **Organizational Functions:** Major functions and units are named and defined using standardized terms
- **Resource Descriptions:** Resources (personnel, equipment, teams and facilities) have common naming based on their type and capabilities
- **Incident Facilities:** Facilities in an incident area are designated using common terms

59

59

Modular Organization

- Organizational structures for incident management (ICS and EOCs) are modular, meaning that they are each building blocks that are put in place as needed based on an incident's size, complexity and hazards.
- The number of management, supervisory, and support positions expand as needed to meet the needs of the incident.

60

60

Management by Objectives

Management by objectives includes:

- Establishing specific, measurable objectives
- Identifying strategies, tactics, tasks, and activities to achieve the objectives
- Developing and issuing assignments, plans, procedures and protocols to accomplish tasks
- Documenting results against objectives to measure performance, facilitate corrective actions, and inform development of objectives for the next operational period

61

61

Incident Action Planning

Incident Action Plans:

- Record and communicate incident objectives, tactics, and assignments for operations and support
- Are recommended for all incidents
- Are not always written, but a written IAP is increasingly important when an incident or activation:
 - Is likely to extend beyond one operational period
 - Becomes more complex
 - Involves multiple jurisdictions or agencies

62

62

Manageable Span of Control

- Span of control refers to the number of subordinates that directly report to a supervisor.
- The optimal span of control for incident management is one supervisor to five subordinates; however, the 1:5 ratio is only a guideline and effective incident management often calls for different ratios.

What could necessitate a change in span of control?

63

63

Incident Facilities and Locations

Typical designated facilities include:

- Incident Command Post (ICP)
- Incident base
- Staging Areas
- Camps
- Mass casualty triage areas
- Points-of-distribution
- Emergency shelters

64

64

Comprehensive Resource Management

- Maintaining accurate and up-to-date resource inventories and resource tracking are essential components of incident management.
- Resources include personnel, equipment, teams, supplies, and facilities available or potentially available for assignment or allocation.

65

65

Integrated Communications

Integrated communications allow units from diverse agencies to connect, share information and achieve situational awareness.

What can help facilitate communications between agencies?

66

66

Establishment and Transfer of Command

When an incident is anticipated or occurs the organization with primary responsibility for the incident establishes command by designating the Incident Commander (IC) or Unified Command (UC).

Why might there need to be a transfer of command?

67

67

Unified Command

In some incidents the Incident Command function is performed by a Unified Command (UC).

UC is typically used for incidents involving:

- Multiple jurisdictions
- A single jurisdiction with multiagency involvement
- Multiple jurisdictions with multiagency involvement

UC allows agencies with different authorities and responsibilities to work together effectively without affecting individual agency authority, responsibility, or accountability.

68

Chain of Command and Unity of Command

Chain of command refers to the orderly command hierarchy within an incident management Organization.

Unity of command means that each individual reports to only one designated supervisor.

These principles:

- Clarify reporting relationships
- Eliminate confusion caused by conflicting instructions
- Enable incident managers at all levels to direct the actions of all personnel under their supervision

69

Accountability

Accountability for all resources during an incident is essential. Incident management personnel should adhere to principles of accountability, including:

- Check-in/checkout
- Incident action planning
- Unity of command
- Personal responsibility
- Span of control
- Resource tracking

70

Dispatch/Deployment

- Resources should deploy only when requested and dispatched through established procedures by appropriate authorities.
- Resources that authorities do not request should not deploy spontaneously - unrequested resources can overburden the IC/UC and increase accountability challenges.

71

71

Information and Intelligence Management

Incident-related information and intelligence is managed by the incident management organization through established processes for:

- Gathering
- Analyzing
- Assessing
- Sharing
- Managing

72

How do you gather and share information during an incident?

72

NIMS Management Characteristics

Lesson 3 Summary

This lesson presented an overview of the fourteen NIMS Management Characteristics

73

73

Incident Command System (ICS)

Lesson 4 Objectives:

- Describe the Incident Command System (ICS) Organizational Structure

79

NIMS Major Components Review

1. Resource Management

2. Command and Coordination

3. Communications and Information Management

```
graph TD; NIMS[National Incident Management System] --> RM[Resource Management]; NIMS --> CC[Command and Coordination]; NIMS --> CIM[Communications and Information Management];
```

Together these NIMS components provide a framework for effective management during incident response.

80

Understanding Command & Coordination

Command

The act of directing, ordering, or controlling by virtue of explicit statutory, regulatory, or delegated authority.

Coordination

The process of providing support to the command structure, and may include incident prioritization, critical resource allocation, communications systems integration, and information exchange.

81

NIMS Command and Coordination

The four NIMS Structure are:

- The Incident Command System (ICS)
- Emergency Operations Centers (EOCs)
- Multi-Agency Coordination Group (MACs)
- The Joint Information System (JIS)

These four elements comprise the NIMS Command and Coordination structures.

82

NIMS Command and Coordination Structures

83

ICS Overview

The Incident Command System (ICS) provides:

- A standardized approach to the command, control, and coordination of on-scene emergency management
- A common structure within which personnel from different organizations can work together
- A structure for incident management that integrates and coordinates procedures, personnel, equipment, facilities, and communications
- ICS is used by all levels of government and many NGOs and private sector organizations.

85

Incident Command Concept

The ICS term Incident Command refers to the person or group responsible for overall on-scene management of an incident.

There are two general forms of the incident command function:

- A single Incident Commander
- A Unified Command

86

86

Incident Commander Responsibilities

Each designated agency Incident Commander functioning in a Unified Command must:

- Act within his/her jurisdictional or agency limitations.
- Inform the other Commanders of any legal, political, jurisdictional, or safety restrictions.
- Be authorized to perform certain activities and actions on behalf of the jurisdiction or agency he/she represents.
- Manage the incident to the best of his/her abilities.

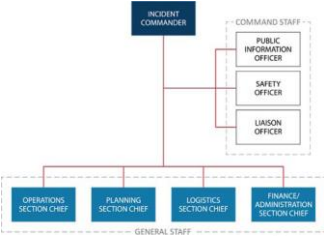

87

87

Incident Command Concept

Command and General Staff support the incident command in management of the incident.

```
graph TD; IC[Incident Commander] --- GS[General Staff]; IC --- CS[Command Staff]; GS --- OSC[Operations Section Chief]; GS --- PSC[Planning Section Chief]; GS --- LSC[Logistics Section Chief]; GS --- FASC[Finance/Administration Section Chief]; CS --- PIO[Public Information Officer]; CS --- SO[Safety Officer]; CS --- LO[Liaison Officer];
```

88

88

Unified Command

As a team effort, Unified Command allows all agencies with jurisdictional authority or functional responsibility for an incident to jointly provide management direction to the incident.

In Unified Command, no agency's legal authorities will be compromised or neglected.

89

89

Unified Command Concept

Command and General Staff support the unified command in management of the incident.

90

90

Command Staff

It may be necessary for the Incident Commander to designate a Command Staff that:

- Provides information, liaison, and safety services for the entire organization.
- Reports directly to the Incident Commander.

91

91

General Staff

- Intelligence/Investigations may be added as a function, if required, to meet incident management needs.
- An Environmental Unit may also be added to the Planning Section to coordinate and manage large volumes of environmental sampling/analytical data from multiple sources.

92

92

Area Command

- Provide agency or jurisdictional authority for assigned incidents.
 - Ensure a clear understanding of agency expectations, intentions, and constraints.
 - Establish critical resource use priorities between various incidents.
 - Ensure that Incident Management Team personnel assignments and organizations are appropriate.
 - Maintain contact with officials in charge, and other agencies and groups.
 - Coordinate the demobilization or reassignment of resources between assigned incidents.
-
- ```

graph TD
 EOC[EMERGENCY OPERATIONS CENTER] --- AC[AREA COMMAND
UNIFIED AREA COMMAND]
 AC --- I1[INCIDENT]
 AC --- I2[INCIDENT]
 AC --- I3[INCIDENT]

```

93

93

## Incident Management Assistance Teams

- Some IMTs are referred to as Incident Management Assistance Teams (IMAT) to clarify that they **support** on-scene personnel and/or the affected jurisdiction(s).
- IMATs ensure that federal activities align with local priorities through participation in Unified Command or a Unified Coordination Group with representatives from local, state, and/or tribal government.
- IMATs exist at various levels of government and within the private sector.
- Regardless of who owns particular IMATs or their specific missions, IMATs operate using the principles and practices of ICS.

94

94

### Incident Command System (ICS)

Lesson 4  
Summary

The lesson specifically discussed:

- Incident Command
- Command Staff
- General Staff
- Incident Management Teams
- Incident Management Assistance Teams
- Area Command

95

95

---

---

---

---

---

---

---

---

### Emergency Operations Centers

Lesson 5  
Objectives:

At the end of this lesson, you will be able to describe basic:

- Emergency Operations Center (EOC) Functions
- EOC Staff Organization Models
- EOC Activation Levels

99

99

---

---

---

---

---

---

---

---

### EOC Overview (1 of 2)

- Emergency Operations Centers are one of four NIMS Command and Coordination structures.
- ICS is used to manage on-scene, tactical-level response; EOCs are off site locations where staff from multiple agencies come together to:
  - Address imminent threats and hazards
  - Provide coordinated support to incident command, on-scene personnel and/or other EOCs

100

100

---

---

---

---

---

---

---

---

### EOC Overview (2 of 2)

EOCs generally perform the following primary functions:

- Collecting, analyzing and sharing information
- Supporting resource needs and requests, including allocation and tracking
- Coordinating plans and determining current and future needs

EOCs can be fixed locations, temporary facilities or virtual structures with staff participating remotely.

101

101

---

---

---

---

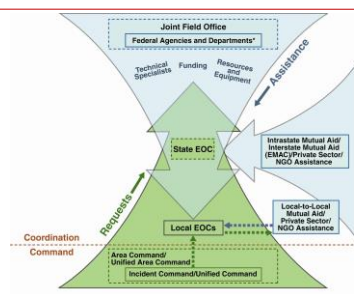

---

---

---

---

### Flow of Requests and Assistance

The diagram illustrates the flow of requests and assistance within the National Incident Management System. It features a central green triangle with three levels: 'Local EOCs' at the base, 'State EOC' in the middle, and 'Joint Field Office' at the top. Arrows indicate the flow of 'Requests' upwards and 'Assistance' downwards. The Joint Field Office is associated with 'Federal Agencies and Departments', 'Technical Specialists', 'Funding', and 'Resources and Equipment'. The State EOC is associated with 'Intrastate Mutual Aid', 'Interstate Mutual Aid (EMAC/Private Sector)', and 'NGO Assistance'. The Local EOCs are associated with 'Local-to-Local Mutual Aid', 'Private Sector', and 'NGO Assistance'. Below the triangle, a dashed box contains 'Area Command', 'Unified Area Command', and 'Incident Command/Unified Command'. To the left, a dashed box contains 'Coordination' and 'Command'.

102

102

---

---

---

---

---

---

---

---

### EOC Configuration (1 of 2)

EOC teams vary widely. Organization of the EOC staff can vary based on:

- Jurisdictional/organizational authorities
- Staffing
- Partner and stakeholder agencies represented
- EOC facilities
- EOC communications capabilities
- Political considerations
- The mission

103

103

---

---

---

---

---

---

---

---

### EOC Configuration (2 of 2)

NIMS identifies three common ways of organizing EOC Teams:

1. ICS or ICS-like structure
2. Incident Support Model structure
3. Departmental structure

Like ICS, EOCs utilize the NIMS management characteristic **modular organization**.

104

---

---

---

---

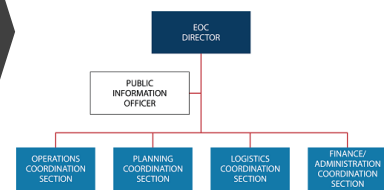

---

---

---

104

### ICS or ICS-like EOC Structure

The structure is familiar and it aligns with the on-scene incident organization.

105

---

---

---

---

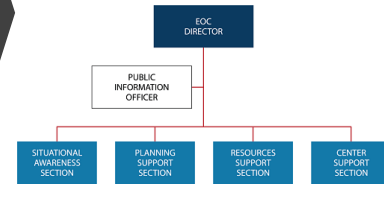

---

---

---

105

### Incident Support Model (ISM) EOC Structure

106

---

---

---

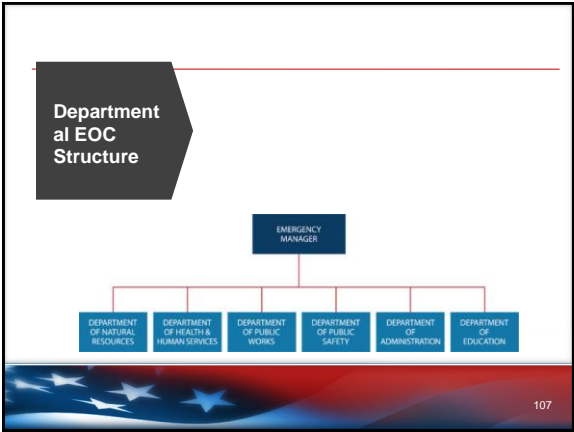

---

---

---

---

106

---

---

---

---

---

---

---

---

107

**EOC Activation (1 of 2)**

Some circumstances that might trigger center activation include:

- Multiple jurisdictions or agencies involved in an incident.
- The Incident Commander or Unified Command indicates an incident could expand rapidly, involve cascading effects or require additional resources.
- A similar incident in the past led to EOC activation.

108

---

---

---

---

---

---

---

---

108

**EOC Activation (2 of 2)**

- The EOC Director or an appointed or elected official directs EOC activation.
- An incident is imminent such as predicted hurricane, flooding, hazardous weather, or elevated threat levels.
- Threshold events described in an emergency operations plan occur.
- Significant impacts to the population are anticipated.

109

---

---

---

---

---

---

---

---

109

EOC  
Activation  
Levels

Emergency Operations Centers frequently have multiple activation levels to allow for:

- Response scaled to the incident
- Delivery of the exact resources needed
- A level of coordination appropriate to the incident

110

---

---

---

---

---

---

---

110

### EOC Activation Levels

| Activation Level                               | Description                                                                                                                                                                                                                                      |
|------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 3 Normal Operations/<br>Steady State           | <ul style="list-style-type: none"><li>• Activities that are normal for the EOC when no incident or specific risk or hazard has been identified</li><li>• Routine watch and warning activities if the EOC normally houses this function</li></ul> |
| 2 Enhanced Steady-State/<br>Partial Activation | <ul style="list-style-type: none"><li>• Certain EOC team members/organizations are activated to monitor a credible threat, risk, or hazard and/or to support the response to a new and potentially evolving incident</li></ul>                   |
| 1 Full Activation                              | <ul style="list-style-type: none"><li>• EOC team is activated, including personnel from all assisting agencies, to support the response to a major incident or credible threat</li></ul>                                                         |

111

---

---

---

---

---

---

---

111

### Emergency Operation Centers

Lesson 5  
Summary

The lesson specifically discussed:

- EOC Functions
- EOC Staff Organization Models
- EOC Activation Levels

112

---

---

---

---

---

---

---

112

### Lesson 6 Objectives:

#### Other NIMS Structures and Interconnectivity

At the end of this lesson, you will be able to describe basic:

- Identify the roles and responsibilities of the Multiagency Coordination Group (MAC Group)
- Describe the Joint Information System (JIS)
- Describe Interconnectivity of NIMS Command and Coordination Structures

117

---

---

---

---

---

---

---

---

117

### Multi-Agency Coordination Challenges

Coordination challenges between different agencies responding to an incident may include:

- Different policies and procedures
- Unfamiliarity with other agencies
- Complex incidents
- Lack of resource information
- Intense media and public scrutiny
- Lack of interagency coordination

Need for a Multi-Agency Coordination System

118

---

---

---

---

---

---

---

---

118

### MAC Group Definition and Composition (1 of 2)

- Multiagency Coordination Groups (MAC Group) are part of the off-site incident management structure of NIMS.
- MAC Group members are typically agency administrators, executives or their designees from stakeholder agencies or organizations impacted by and with resources committed to the incident.
- MAC Group may also include representatives from non-governmental organizations such as businesses and volunteer organizations.

119

---

---

---

---

---

---

---

---

119

### MAC Group Definition and Composition (2 of 2)

During incidents, MAC Groups:

- Act as a policy-level body
- Support resource prioritization and allocation
- Make cooperative multi-agency decisions
- Enable decision making among elected and appointed officials and the Incident Commander responsible for managing the incident.

The MAC Group does not perform incident command functions, nor does it replace the primary functions of EOCs or other operations, coordination, or dispatch organizations.

120

120

---

---

---

---

---

---

---

---

### Elected and Appointed Officials

Elected and appointed officials operate at the policy level of incident management. The MAC Group provides a way for these policy-level officials to work together, enhancing unity of effort at the senior level.

121

121

---

---

---

---

---

---

---

---

### Joint Information System (JIS)

JIS integrates incident information and public affairs into a unified organization that provides consistent, coordinated, accurate, accessible, timely and complete information to the public and stakeholders during incident operations.

What are some functions of the PIO?

123

123

---

---

---

---

---

---

---

---

### JIS Description and Components: JIC

- **The JIC** is a central location that houses JIS operations and where public information staff perform essential information and public affairs functions.
- Normally, an incident should have a single JIC, but the JIS is flexible and can accommodate multiple

124

---

---

---

---

---

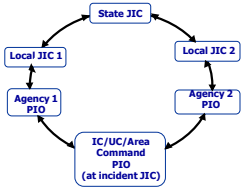

---

---

---

### JIC Characteristics

- Includes representatives of all players in the response (each retains their organizational independence)
- Has procedures and protocols for communicating and coordinating with other JICs via the JIS

125

---

---

---

---

---

---

---

---

### Public and Stakeholder Information

Getting information to the public and stakeholders during an incident requires an ongoing information cycle:

- **Gathering** complete information for the public and other stakeholders
- **Verifying** information to ensure accuracy
- **Coordinating** information with other public information personnel who are part of the JIS to ensure consistency
- **Disseminating** consistent, coordinated, accurate, accessible, timely and complete information to the public and stakeholders

126

---

---

---

---

---

---

---

---

### Public Information Communications Planning

The information communications plan can include:

- Draft news releases
- Media lists
- Contact information for elected/appointed officials, community leaders, private sector organizations, and public service organizations

Public information communications plans should be included in training and exercises in order to prepare for actual incidents.

127

127

---

---

---

---

---

---

---

---

### Interconnectivity of NIMS Command and Coordination Structures (1 of 3)

- NIMS structures enable incident managers to manage incidents in a unified, consistent manner.
- Interconnectivity of NIMS structures is important to allow personnel in diverse geographic areas, with differing roles and responsibilities, and operating within various functions of ICS and/or EOCs to integrate their efforts through common organizational structures, terminology, and processes.

129

129

---

---

---

---

---

---

---

---

### Interconnectivity of NIMS Command and Coordination Structures (2 of 3)

- When an incident occurs or threatens, local emergency personnel manage response using NIMS principles and **ICS**.
- If the incident is or becomes large or complex, local **EOCs** activate.
- EOCs receive senior level guidance from **MAC Groups**.

130

130

---

---

---

---

---

---

---

---

### Interconnectivity of NIMS Command and Coordination Structures (3 of 3)

- A Joint Information Center (JIC) manages the Joint Information System (**JIS**) operations to ensure coordinated and accurate public messaging among all levels: ICS, EOC and MAC Group.
- If required resources are not available locally, they can be obtained under **mutual aid agreements** from neighboring jurisdictions, or State, tribal, territorial, and interstate sources and assigned to the control of the Incident Commander or Unified Command.

131

131

---

---

---

---

---

---

---

### Federal Support to Response Activities

The Federal Government only becomes involved with a response:

- When state governors or tribal leaders request Federal assistance and their requests are approved
- When Federal interests are involved
- As statute or regulation authorizes or requires

In most cases the Federal Government plays a supporting role to state, tribal, or territorial governments by providing Federal assistance to the affected jurisdictions.

132

132

---

---

---

---

---

---

---

### Other NIMS Structures and Interconnectivity

Lesson 6  
Summary

The lesson specifically discussed:

- Multiagency Coordination Group (MAC Group)
- Joint Information System (JIS)
- Interconnectivity of NIMS Command and Coordination Structures

133

133

---

---

---

---

---

---

---

### Communications and Information Management

---

#### Lesson 7 Objectives:

At the end of this lesson, you will be able to:

- Identify the four key principles of communications and information management.
- Describe the communications management practices and considerations.
- Identify how incident information is used.
- Identify the three concepts related to Communications Standards and Formats.

137

---

---

---

---

---

---

---

---

137

### Communications and Information Management Principles

---

Four key communications and information systems principles support the ability of incident managers to maintain this constant flow of information during an incident:

- Interoperability
- Reliability, Scalability, and Portability
- Resilience and Redundancy
- Security

138

---

---

---

---

---

---

---

---

138

### Principle: Interoperability

---

Interoperable communications systems enable personnel and organizations to communicate:

- Within and across jurisdictions and organizations
- Via voice, data, and video systems
- In real time

139

---

---

---

---

---

---

---

---

139

### Principle: Reliability, Portability, and Scalability

Communications and information systems should be designed to be:

- **Reliable** - familiar to users, adaptable to new technology and dependable in any situation
- **Portable** - can effectively be transported, deployed, and integrated to enable support of incidents across jurisdictions
- **Scalable** - able to expand to support situations, from small to large scale, and support the rapid increase in the number of system users

140

140

---

---

---

---

---

---

---

### Principle: Resiliency and Redundancy

Resilient and redundant communications ensure the uninterrupted flow of information.

- **Resiliency** - systems can withstand and continue to perform after damage or loss of infrastructure
- **Redundancy** - when primary communication methods fail, duplicate systems enable continuity through alternate communication methods

141

141

---

---

---

---

---

---

---

### Principle: Security

Because some incident information is sensitive, voice, data, networks, and systems should be secure to the appropriate level to control access to sensitive or restricted information.

In addition, incident communications and information sharing should comply with data protection and privacy laws.

142

142

---

---

---

---

---

---

---

**Communications Management Characteristics**

- Incident management personnel must manage incident communications and information effectively using a variety of communications methods.
- Management procedures should change to use new technologies and improved methods of exchanging information.

143

143

---

---

---

---

---

---

---

---

**Standardized Communications Types**

- Strategic Communications
- Tactical Communications
- Support Communications
- Public Communications

144

144

---

---

---

---

---

---

---

---

**Communications and Information Management: Policy and Planning**

Communications planning determines:

- What communications systems and platforms are used
- Who can use the communications systems
- What information is essential
- What the technical requirements are for communications equipment and systems

145

145

---

---

---

---

---

---

---

---

**Communications and Information Management: Agreements**

Agreements should be in place between all parties in a jurisdiction's emergency operations plan to ensure that the communications elements within plans and procedures are in effect at the time of an incident. Agreements typically specify:

- Communication systems and platforms that the parties will use to share information
- Connection of networks, data format standards, and cybersecurity agreements.

146

146

---

---

---

---

---

---

---

---

**Communications and Information Management: Equipment Standards**

When developing communications systems, personnel should consider:

- The range of conditions under which personnel will use the systems.
- The range of potential system users.
- The current nationally recognized communications standards.
- The need for durable equipment.

147

147

---

---

---

---

---

---

---

---

**Communications and Information Management: Communication Standards**

During an incident, all incident personnel are linked by common communications standards and formats:

- Common Terminology, Plain Language and Compatibility
- Technology Use and Procedures
- Information Security/Operational Security

148

148

---

---

---

---

---

---

---

---

### Training and Exercises

- Ensure personnel can function effectively together across jurisdictions and disciplines
- Types of Training
  - Incident Command System
  - Discipline or Agency Specific
  - Plan Specific
- Exercise the plan to help execute it more effectively
- Incorporate corrective actions from exercises
- Exercise with other agencies and jurisdictions
- Employ interoperable communication systems and equipment

149

---

---

---

---

---

---

---

---

### Tabletop Exercise Tool for Drinking Water and Wastewater Systems

TTX Tool contains 12 all-hazards scenarios with:

- Fully-customizable situation manuals and after action reports
- Discussion questions
- PowerPoint presentations

**The tool is available at:**  
<https://www.epa.gov/waterresiliencetraining/develop-and-conduct-water-resilience-tabletop-exercise-water-utilities>

150

---

---

---

---

---

---

---

---

### Communications and Information Management: Information Sharing

Information is used for many functions within ICS, EOCs, MAC Groups, and JIS, including:

- Aiding in planning
- Communicating with the public, including emergency protective measures
- Determining incident cost
- Assessing the need for additional involvement of non-governmental organizations or private sector resources
- Identifying safety issues
- Resolving information requests

151

---

---

---

---

---

---

---

---

### Communications and Information Management

Lesson 7  
Summary

Lesson 7 specifically discussed:

- Key Principles of Communications and Information Management
- Communications and Information Management Characteristics
- Elements of Incident Information
- Communication Standards and Format

153

153

---

---

---

---

---

---

---

---

### Course Summary and Exam

Lesson 8  
Review

Congratulations! You should now be able to demonstrate a basic understanding of NIMS concepts, principles, and components.

- NIMS Overview
- Fundamentals and Concepts of NIMS
- NIMS Resource Management
- NIMS Management Characteristics
- Incident Command System (ICS)
- Emergency Operations Centers (EOC)
- Other NIMS Structures and Interconnectivity
- Communications and Information Management

157

157

---

---

---

---

---

---

---

---

### Additional Resources

**For more information on NIMS:**  
<https://www.fema.gov/national-incident-management-system>

**To contact the NIC:**  
**202-646-3850**  
[NIMS-Integration-Center@dhs.gov](mailto:NIMS-Integration-Center@dhs.gov)

---

---

---

---

---

---

---

### FEMA Student Identification (SID) Number

How do I obtain my FEMA Student Identification (SID) number?

Step 1: To register, go to <https://cdp.dhs.gov/femasid>

Step 2: Click on the "Register for a FEMA SID" box.

Step 3: Follow the instructions and provide the necessary information to create your account.

Step 4: You will receive an email with your SID number.  
(You should save this number in a secure location.)

When you begin the exam process you will be asked to enter your SID.

159

---

---

---

---

---

---

---

---

159

### On-Line Exam Instructions

1. Paste the below link into your web browser:  
<https://training.fema.gov/is/courseoverview.aspx?code=IS-700.b>
2. On right hand side, click on "Take Final Exam Online".
3. Fill in the appropriate letters for each corresponding exam question number based on your hard copy test. Remember that test questions and answer may be scrambled online.
4. Click "Continue" at the end of the exam webpage and complete your student information (e.g., SID).
5. Click "Send".

160

---

---

---

---

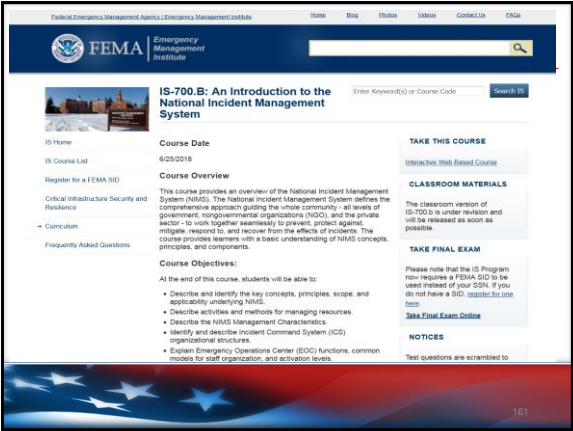

---

---

---

---

160

The screenshot shows the FEMA IS-700.B course page. It includes a sidebar with navigation links like 'IS Home', 'IS Course List', and 'Register for a FEMA SID'. The main content area has a title 'IS-700.B: An Introduction to the National Incident Management System' and a 'Course Overview' section. There are buttons for 'TAKE THIS COURSE' and 'TAKE FINAL EXAM'. The footer of the page shows an American flag graphic and the page number 161.

161

---

---

---

---

---

---

---
