

The AMTA/AWWA Membrane Technology Conference explores how the latest developments in membrane technology can enhance water reliability and quality. Each year the conference reveals new directions in water and wastewater treatment technologies, desalting and membrane bioreactor applications.

2022 MTC will feature one pre-conference workshop day (Monday) followed by three full days of technical educational programming.

Session will include technical podium and poster sessions, pre-conference workshops, facility tours, networking and a comprehensive Exhibit Hall. Attendees will explore how the latest developments in technology can enhance water reliability and quality through membrane filtration, reuse, desalting, RO/NF/MF/UF and MBR for water treatment. The MTC planning committee consists of Subject Matter Experts in the membrane field with extensive experience. They are excited to share an outstanding technical program with our audience.

The 2022 MTC will be held entirely in-person at the Caesars Forum in Las Vegas, Nevada. A conference hotel block has been established at the adjacent, fully renovated Harrah's Las Vegas Hotel.

MTC Exposition

Membrane technologies are increasingly used in many applications including municipal water, wastewater and reuse, as well as in a host of industrial processes. The AMTA/AWWA Membrane Technology Conference & Exposition explores the development and implementation of membrane technologies as well as the operation and maintenance of membrane equipment and facilities. Exhibitors and sponsors in all facets of membrane technology, plant design, operation and maintenance, training, MBR, desalting, reuse, will showcase products, services, and education sessions at the 2022 Membrane Technology Conference (MTC22) & Exposition.
